

# HEAT - Effect of Cleaning – XY Calibration

- ratio of absolute calibration constants before/after cleaning
- HE1:
  - up to ~30% signal increase for lower pixel rows
  - ~18% signal increase on average
- HE2:
  - only ~2% signal increase on average
  - less dirty?
  - decreasing light source intensity?
  - mistake in analysis?
- HE3:
  - similar to HE1
